

IN THE CLAIMS

Please add claims 21 and 22, as follows,

1 --21. A magnetic clip marker for use in engaging and marking a page of a book, the clip
2 marker including in combination:

3 a plurality of discrete magnetic members each exhibiting a thickness;

4 a pair of wall members of unequal length aligned and joined together at a throat to form an
5 integral monolithic structure exhibiting a normally closed orientation, with said wall members
6 comprised of a base portion adjacent said terminal ends and a clip portion overlapping said base
7 portion and extending to said throat, said wall members being oriented to receive insertion of a page
8 of a book between said base portion and said clip portion until an edge of the page engages said
9 throat, said wall members bearing said magnetic members mounted on between said wall members,
10 in aligned facing opposition to permit contact between said magnetic members; and

11 a cover member disposed along said interior surface to form a continuous layer extending
12 from a first of said distal ends, around said throat and to a second of said distal ends while covering
13 and separating said magnetic members and forming a continuously gradual structural transition
14 between a difference in separation between said opposite wall members and between said magnetic
15 members attributable to said thickness.

 --22. the magnetic clip of claim 1, further comprised of said clip marker exhibiting a
normally closed configuration with said wall members being in substantially parallel alignment and

one of said wall members has a length measured from said throat that is substantially longer than another of said wall members.
